

How to Calculate the Length of a Tube Winder Belt:

1. Move the pulleys to the middle of the adjustable range on the horizontal plane
2. Measure the centerline distance between the pulleys (L) as shown in diagram below
3. Measure the circumference of one pulley (PC)
 - a. This assumes that both pulleys are the same circumference
4. Measure the circumference of the tube (TC)

$$\text{BELT LENGTH} = (L \times 2) + PC + TC$$
